

Telcon International Limited
Speciality Magnetic Components

RoHS Statement

The Restriction of use of certain Hazardous Substances (RoHS) in electrical & electronic equipment directive 2015/863/EU becomes enforceable as of 22nd July 2019.

The European Union RoHS Directive restricts the use of:-

- Lead (Pb)
- Mercury (Hg)
- Cadmium (Cd)
- Hexavalent Chromium (Cr (VI))
- Polybrominated Biphenyls (PBB)
- Polybrominated Diphenylethers (PBDE)
- Bis(2-ethylhexyl) Phthalate (PEHP)
- Butyl Benzyl Phthalate (BBP)
- Dibutyl Phthalate (DBP)
- Diisobutyl Phthalate (DIBP)

The products of Telcon International Limited do not fall directly within the scope of the directive as revised by 2015/863/EU (RoHS III) as they are components and therefore are equipment which is not intended to be placed into the market as a single functional or commercial unit and by virtue of this are therefore exempt.

However, Telcon International Limited recognise that most of its products will be incorporated into equipment that does fall within the scope of the directive and we therefore certify that our range of Hall Effect Current Sensors fall within the realm of the directive and contain none of the restricted materials. There are some legacy products for which compliant components are unavailable and these will be phased out with obsolescence.

All of the Telcon International Limited range of RoHS compliant products are clearly labelled as such with the relevant marking on each individual box.
